

FEEDING THE SEAGULLS

Some children fed the seagulls at the beach.
They had **20 pieces** of bread in each bag.

1 If **both** seagulls were fed the same amount, how many pieces of bread would each seagull get?

3 What other numbers of seagulls could the pieces of bread be shared with, so that they each got the same amount?

2 If each of the **5** seagulls was fed the same amount, how many pieces of bread would each seagull get?

4 Try out some of your ideas with counters or arrays to see if you are right.
