FINDING THE NEXT TENS NUMBER

Koko flew round and round in the blizzard to gather food for the chicks.

- 1 Flying **clockwise** round the spiral, write an **addition** equation for each space showing the jump **forward** to the **next tens number**.

Example

For **a**, 30 is the next tens number **after** 27,
so the addition equation is:
 $27 + 3 = 30$

- 2 Walking **anticlockwise** around the spiral with Kiki the kiwi, write a **subtraction** equation showing each jump **back** to the **next tens number**.

Example

For **x**, 1000 is the tens number **before** 1010 so the subtraction equation is:
 $1010 - 10 = 1000$
