

How many ways can you make it?

• a timer

I can make 18 like this.

$$3 \times 4 + 6 = 18$$

- 1 Divide into two groups.
- 2 Have a competition to see which group can find the largest number of ways to make 18 in two minutes.
- 3 Do the same again but this time one group chooses a number for everyone to make in as many ways as possible.

I made 18 like this.

$$24 \div 4 \times 3 = 18$$
