

● Getting around

- a map of your local area

Think of a place that is less than 5 km from your school.
Write or give a classmate some instructions for how to get there.

Example

Go left out of the school gate.
Walk three blocks, about 200 m,
till you come to traffic lights.
Turn right and walk about $\frac{1}{4}$ km till
you get to

Ask your partner to try to follow your directions on the map.
