

RECAP ON GRAPHS

Drawing graphs checklist

- 1 Is this the **best choice** of graph for your data?
- 2 Have you chosen an appropriate scale for your vertical axis?
Example If your data goes from 300 to 580 then you might start your scale at 250 and go up in 50s to 600. This will give you 8 intervals between 250 and 600.
- 3 Have you labelled **both axes**?
- 4 Have you given your graph a suitable **title**?
- 5 Is your data **accurately plotted**?
