

THE CHANGE

1 $\frac{11}{3}$

$\frac{11}{3} = \frac{9}{3} + \frac{2}{3}$

$= \underline{\quad} + \frac{2}{3}$

$= \underline{\quad}$

Why is $\frac{11}{3}$ broken up into $\frac{9}{3}$ and $\frac{2}{3}$ and not something else?

$\frac{9}{3} = 3$ $+ \frac{2}{3}$ $= 3 \frac{2}{3}$

2 $6 \frac{3}{4}$ How many quarters will 6 wholes make?

So $6 \frac{3}{4} = \frac{4}{4} + \frac{4}{4} + \frac{4}{4} + \frac{4}{4} + \underline{\frac{4}{4}} + \underline{\frac{4}{4}} + \frac{3}{4}$

$= \underline{\frac{4}{4}} + \frac{3}{4}$

$= \underline{\underline{\frac{4}{4}}}$
