

BENNY'S TREATS

Max divided each of the bags of treats he bought for Benny into seven equal portions (sevenths).

On Monday he gave Benny $\frac{5}{7}$ of a bag while he was training him to fetch.

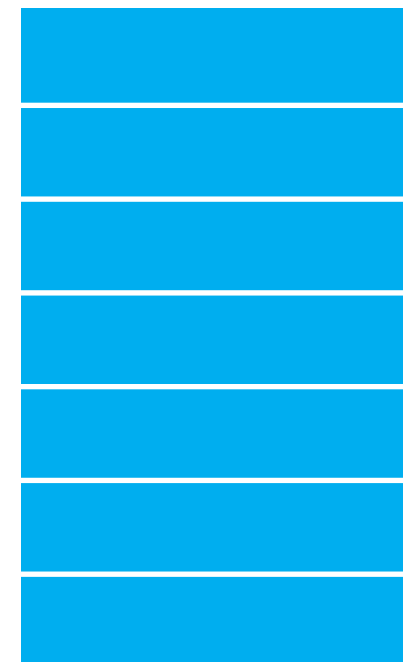

On Tuesday he gave him $\frac{3}{7}$ of a bag when he was bathing him.

How many bags of treats has he given to Benny?

$$\frac{5}{7} + \frac{3}{7} = \frac{?}{7}$$
