

MEET THE TARGET

- 1** Choose a target number such as 144, 240, 300.
- 2** Divide into two groups or into pairs.
(This can be done individually if you prefer).
- 3** Start with 2 and multiply or divide 2 by a 1-digit number.
Example $2 \times 4 = 8$
- 4** Then multiply or divide the answer from **step 3** by a 1-digit number.
Example $8 \times 9 = 72$
- 5** Keep repeating multiplying or dividing by a 1-digit number to try to reach the target number.
- 6** The group that reaches the target number first is the winner.
Example
 $2 \times 4 = 8$
 $8 \times 9 = 72$
 $72 \times 2 = 144$
