

4 Game

Target Number

- a calculator

- 1 Choose a target number and a starting number.

Example 150 and 12

- 2 **Player 1** keys in the starting number and then $\times$.

Example $12 \times$

- 3 **Player 2** enters another number and $=$.

Example $13 =$

You can multiply by a decimal.

- 4 Repeat **steps 2** and **3** until the target is hit.

- 5 The player that gets the target number displayed wins. If the display on the screen is 150.682 this is a hit.

- 6 Play again with a new target number.
