

3 ESTIMATING AND WORKING WITH TIME

Estimate how long it would take you to do each of these:

- count backwards from 100 in 5s
- write down your name 20 times
- say all the months and seasons in a year
- work out how many days until your next birthday
- blink 50 times
- hop on one foot 25 times
- write down the names of all the students in your class

- a Take turns with your partner to time how long it takes you to do each of the above. How close were you to your estimate?
- b Practise doing **one** of the actions and repeat the estimating and timing.
- c Was your estimate closer to the actual time it took?
- d Were you faster? By how much?
