

1 DANCE PATTERNS

Creating a dance or haka

• a die

Each person in the group must create one dance step or move.

The dance will be made up of these individual steps joined together to make a set of moves.

Each time the set is performed the steps must be performed in the same order.

The final dance or haka must have exactly 50 individual steps or dance moves made up of repeated sets of the group's steps.

You can do this as a competition and vote on which group has the best dance or haka.

- 1 Everyone rolls the die.
The person with the highest number makes up one simple step that will be part of a dance or haka.
- 2 Everyone who has not yet made up a dance step rolls the die again.
The person with the highest number makes up a different step.
- 3 Repeat **step 2** until everyone in your group has made up a step.
- 4 Put the steps of each person in your group together one after the other in the order they were made.
- 5 Predict which person in your group will be the last person to move in your dance.
- 6 Perform all 50 steps of your dance.
Was your prediction correct?
