

2 MAKE THE NEST

• 5 counters

- 1 Put one counter on each twig.
 - 2 The aim is to move all of the counters (twigs) to the nest in as few moves as possible.
 - 3 You may move one counter forwards or backwards just one space at a time.
You may put one counter on top of another.
 - 4 If there are counters on top of one another they must be moved as a group.
These groups must move the same number of spaces as there are counters in the group.
- Example:** This group of three counters must move three spaces backwards or three spaces forwards.
- 5 Counters must land exactly on the nest.
 - 6 Play the game many times.
 - 7 What is the smallest number of moves you can make to get all the counters to the nest?
 - 8 What if you change the board and have six twigs? What about seven twigs?
