

100% NZ publisher fully covers the new maths curriculum - years 3 to 8.

Caxton Educational is New Zealand's quietly confident champion of mathematics. Their resources are engaging, purposeful, and utterly class-room friendly.

Based in Christchurch, this extraordinary publisher has been shaping Kiwi maths education for four decades, producing resources that sync seamlessly with the New Zealand Curriculum. What sets Caxton apart is their blend of deep curriculum knowledge and a genuine understanding of what works in New Zealand schools, and for New Zealand students.

Caxton's flagship series, 'NZ Curriculum Mathematics – Connecting All Strands', delivers an intuitive progression through years 3 to 8 maths, helping students build conceptual understanding, problem-solving skills, algorithmic skills, mathematical thinking and confidence. Teachers report it's the kind of resource that "boosts

confidence and skills and makes teaching enjoyable", even for those new in the profession. These aren't just textbooks, they're learning journeys, backed up with mapping guides to make planning very easy for teachers and supplementary materials to support diverse needs and teaching styles.

In 2024, Caxton refreshed its core series with new editions, bolstering their Teacher Mapping Guides, Supplementary Student Material, and Online Support. Everything connects, no more guesswork on coverage or alignment. Schools can order class sets, taking advantage of bulk-order discounts that make classroom-wide adoption feel effortless.

"boosts confidence and skills and makes teaching enjoyable".

What makes Caxton feel like a partner, not just a supplier, is how responsive they are. The team knows that teachers juggle a million things, so they've built an online hub for quick help, objective by objective mapping, and extra downloadable resources. It's all part of a philosophy that believes teachers and students deserve materials that are high-quality, locally developed, easy to pick up and use, and fully cover the new curriculum.

Feedback flows in naturally. One teacher said Caxton's series was "a lifesaver". Several lamented its absence from the Ministry list of suppliers, saying it genuinely "covers a balanced, rich

programme". That respect from the teaching community speaks volumes: "boosts confidence and skills and makes teaching enjoyable".

For any school, Kahui ako, or teacher, needing a structured, supportive maths programme that fully covers the new 2024 curriculum, Caxton Educational is the conversation starter you've been waiting for. Visit their website caxed.co.nz for more information.

Caxton Educational Ltd (CaxEd) is proud to publish New Zealand's most widely used and respected series of maths books. These texts are written specifically to support teachers in mathematics for years 3 to 8, and for the new 2024 New Zealand Mathematics Curriculum.
