

Chapter 11 – Rich task 1 - Accident prone

Page 187

1

Accident prone

- At 5 pm there was an accident and cars were queued for 2 km. After the accident was cleared the cars moved off at 3 cars per minute.
- Is the radio announcer's statement reasonable? Give your reasons and working.
- You will need to:
 - Estimate the length of an average sized car.
 - Estimate the distance that would be between two cars.

There must be about 300 cars in the queue. The last car will be 2 hours late home tonight.
